About this guide

The learning assessment assesses children’s basic literacy and numeracy skills. The assessment includes recognition of numbers and letters, phonemic awareness (differentiating for sounds and their meaning) and listening comprehension. This part of the survey differs from other components since you will be working directly with children. This manual explains the specific skills, abilities, and considerations required for working with children and provides instructions for conducting the learning assessment.

Research with children

Research with children is different to research with adults in two important ways:

1. Children, especially younger children, may not be able to communicate their feelings as well as adults.
2. Because adults often represent authority figures (parent, teacher, Imam) children may feel intimidated by adults, which can make them less likely to speak up. Alternatively they may feel pressured into participating.

Therefore, although all research needs to occur within the same strict ethical guidelines, particular care needs to be taken when conducting research with children. As a researcher, it is your job to make sure that the children taking the learning assessment feel comfortable and understand the purpose of the assessment. It is your responsibility to adapt to the child’s level of understanding. To help you do this, it’s important to think about two things: (1) how you engage the child’s participation, and (2) how you communicate with the child.

Participation

Children, like adults, should be made to feel like participants in the research process. In order to ensure children’s participation, you need to build trust and respect with them, explaining the research and their role in it. You should also be sure to provide opportunities for children to ask questions and explain any aspects of the research that they don’t understand or would like more information about. Below you will find examples of useful phrases that you may say to children during the learning assessment.

Communication

It is crucial that children understand the purpose of the research and the basis for their informed consent (see below). You need to make sure the children can understand the explanation you give.
All consent and learning assessment questions have been written in clear and simple language that children can understand. You should follow the script provided.

At the same time remember that communication is about more than language. For example, the way you react to children’s responses can make children feel happy or upset. You should be careful not to convey responses or use body language that will make children feel that they have done something wrong.

**Guidance note 1: Do No Harm**

“DO NO HARM” refers to the importance of ensuring that research supports respondents’ safety and well-being. Children may experience harm from research in different ways. This harm may be unintended which is why it is important to pay attention to the ways you ask questions as well as children’s reactions to questions. In the case of the learning assessment for example the ways in which you react to children’s responses may leave them feeling stigmatized or humiliated if they do not know the answer to a question. You can reduce these feelings by reassuring the children that she or he is doing a good job and that it does not matter whether she or he does or does not know answers to the different questions.

### Informed consent with children

When conducting research with children you must first obtain informed consent from parents. The researcher who is conducting the household survey will ask for this permission from the responsible adult in the household. However, to proceed with the learning assessment you must also request the assent of the child. As is the case for adults, children also have the right to refuse participation at anytime.

In order for a research participant to provide informed consent they must be fully informed about the research and understand it’s purpose. As already discussed this may require that you adjust your language to explain to children the objectives of the learning assessment in a way that makes sense to them. The box below provides a script you can use to explain the research to the child.

**EXPLAINING THE RESEARCH TO CHILDREN**

To explain the learning assessment to the children taking it, tell them that you want to play a short game to understand how much they have learned at home or at school.

If either the parent / caregiver or child does not provided their consent, the learning assessment cannot be carried out.
<table>
<thead>
<tr>
<th>Parent / Caregiver response</th>
<th>Child's response</th>
<th>Learning assessment</th>
</tr>
</thead>
<tbody>
<tr>
<td>Agrees</td>
<td>Agrees</td>
<td>✓ proceed with the assessment as both the caregiver and children provide their consent</td>
</tr>
<tr>
<td>Agrees</td>
<td>Disagrees</td>
<td>✗ assessment cannot go ahead without the consent of the child</td>
</tr>
<tr>
<td>Disagrees</td>
<td>Disagrees</td>
<td>✗ assessment cannot go ahead without the consent of the parent and child</td>
</tr>
</tbody>
</table>

It is also important to remember that informed consent is not something that occurs at a single moment. As with adults, children must also understand that they can withdraw from the research at any time. Since children may be less willing to verbally express their discontent or discomfort you need to be especially attentive to how they may be feeling.

Guidance note 2: researcher reflexivity

Researcher reflexivity is an important skill, especially when working with children. Being reflexive means you are aware of the environment around you and how it may affect a child. It also means being aware of how you may affect a child you are interacting with and how the child is feeling. If the child appears uncomfortable or upset then you must adapt the situation to make the child feel more comfortable, confident and happy. The following advice can be used to make sure you are a reflexive enumerator:

i) **Provide children with opportunities to vocalize their feelings** about participation in this research and ensure that they feel comfortable to end their participation at any time.

ii) **Listen to the child’s responses for signs of distress.** If a child says they are upset you should respond to this. This may include reassuring them that this is not a test, that their participation is helping other children and schools in Afghanistan, and that their answers are confidential. If the child is still visibly upset then you should end the assessment.

iii) **Never react with frustration, anger, or impatience to children’s answers or inability to answer.** You should remain calm and positive throughout the interview providing words of encouragement as the child moves from one question to the next (see section on useful phrases).

iv) **Pay attention to children’s body language and non-verbal reactions for signs of distress.** This may include shifting around nervously, looking the other way or long periods of silence. If you notice this the child doing any of these things, take the time to check in with the child and reassure and encourage them.
Working with parents and caregivers

You may not be able to conduct the learning assessment in the absence of the child’s parent / caregiver or other family members. If possible and appropriate, you should encourage parents or other family members to stay in a neighboring room or at some distance from the child. You should also ask observing parents or family members to remain silent during the assessment.

Despite these requests, parents or other family members may try to intervene. They may pressure the child to continue, point out correct answers to the child, or admonish the child if the child gets a question incorrect. This is a problem as it can cause the child distress or invalidate the results.

- Prior to beginning the assessment, explain clearly to the parent / caregiver that this is not a test and that the most important thing is that you are able to assess the responses of the child.
- Encourage the adults to sit out of view of the question cards, to limit their ability to provide answers.
- Use the child’s name when asking a question.
- Direct eye contact at the child rather than the adult(s) in the room.

In cases where parents do intervene, you should gently remind them this is not a test. You can tell them that whether or not the child gets the answers correct will have no impact on his or her schooling. Politely reiterate the importance of having the child’s responses only. Make sure that you are polite and respectful whenever you speak with the parent.
Useful phrases

The following are examples of things you can say to children to encourage them during the learning assessment. Spend some time thinking of additional phrases that would be appropriate to use...

- You are doing a really good job!
- Can you point to the response you think is best?
- Is it helpful for me to explain the question again?
- Thank you for your help!
- Can you tell me what you think the answer is?
- Remember that this is not a test. It is ok if you do not know an answer.
- That’s a very good observation.
- Do you have any questions for me before we move onto the next question?
- You should be proud of yourself! The work you are doing now will help other children and other schools in Afghanistan.
**Setting up the test**

You will be provided with three tools to implement the learning assessment:

i. A phone to time the duration of each question.

ii. The survey tool, which includes space to record the answers and instructions for marking each question.

iii. A set of show cards prepared for each question. You will show these the child during the assessment.

It is important to set up the space for the learning assessment in a way that allows you to use each of the tools appropriately.

The survey tool is for your use only. Since it contains the answers to each question you should be careful to keep the survey tool out of sight of the child and the parent (though ideally the parent will already be sitting some distance from the child). For example, if you are sitting on the floor next to the child, you should put the tool off to the side and face down when you are not using it. When marking answers, try to hold the tool close to your body or out of sight of the child and the parent.

The timer should also be managed discreetly. If possible, you should place on the opposite side of you from the child so that it can be kept out of the child’s and will not so distract them.

The show cards should be placed directly in from of the child, since each question asks the child to point look at or point to answers on the show card.

**Reading questions**

Each child between ages 6-11 in each household will be administered a separate learning assessment. You should use a separate answer form for each child. As the surveyor administering the assessment you will required both to ask the questions and keep time for each question.

If, at any point during the test, the child asks for a question to be repeated, you may repeat the question once. No question should be repeated more than once. If the child asks for the question to be repeated a second time, you should say, ‘why don’t we try a different question instead?’ and move on to the next question. The question that the child asked to be repeated twice should be marked as 3 ‘Not attempted.’

If, at any point during the test, the child asks to know the answer to a question, you should explain to the child that, for the moment you should move on to the next question so that the game is not interrupted. However, any question can be discussed after the game is over.
**Timing**

Unless otherwise stated, most questions require that you provide the child with 15 seconds to answer (a few questions instruct you to wait 30 seconds or 1 minute). To keep time, you should leave the timer on your phone running. Make sure to put the phone in a place where you can see it, but it is not visible to the child. You do not need to keep track of the time precisely, but should generally make sure that you move on to the next sub-question when the time runs out. If this happens, reassure the child that she or he has not done anything wrong and there is no problem. If the child does not provide any answer within the allotted time then you should mark down that the question was not attempted.

**Recording answers**

You should ask each question exactly as it is written and as the instructions stipulate and mark each answer as correct, incorrect, or not attempted, according to the guidelines below. You should carefully read the instructions for each question and memorize them before conducting the tests.

If, when answering the question, the child gives one answer and then immediately changes his/her mind and gives a different answer, you should mark the second (last) answer given, regardless of whether the answer is correct or incorrect.

Instructions for the two main types of answer options are provided in the table below.
<table>
<thead>
<tr>
<th>ANSWER TYPE ONE</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>For questions where the child is asked to identify letters or numbers along a row or to count the number of words in a phrase you will be asked to count up the total number of correct, incorrect, and not attempted (Q1, Q5, and Q9). You should fill in the number applicable to each response category. The total for all three categories should equal the total number of responses possible for that row (in Q1 and Q5, 10 responses are possible; in Q9 the number of possible responses changes by row)</strong></td>
<td></td>
</tr>
<tr>
<td><strong>1. Total Correct</strong></td>
<td>This should equal the total number of letters or numbers in the row that a child attempted to answer and for which they provided the right response (as indicated on the survey tool). These are marked with a circle.</td>
</tr>
<tr>
<td><strong>2. Total Incorrect</strong></td>
<td>This should equal the total number of letters or numbers in the row that a child attempted to answer but provided the wrong response for. These are marked with an “X”.</td>
</tr>
<tr>
<td><strong>3. Total Not-attempted</strong></td>
<td>Count up the total number of letters or numbers that the child did not attempt to answer. If they were silent or passed over a letter or number without offering an answer then you should mark it as not attempted. These are marked with a “/”.</td>
</tr>
<tr>
<td><strong>External help</strong></td>
<td>If at any point a third person helps the child by pointing to or verbalizing an answer you must note this down here. Mark “1 Yes” if the child received external help. Mark “2 No” if the child did not.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>ANSWER TYPE TWO</th>
<th>EXPLANATION</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Children may be shown a card with a word or pattern of images and numbers on it. Unless otherwise noted, the child is given 15 seconds to answer the question. You are required to note if the question was answered properly by selecting one of three main responses (1, 2 or 3 marked below). You will also see this type of response for listening comprehension questions (such as Q10). In this case you should both add the answer provided by the child and circle one of the three response options explained below.</strong></td>
<td></td>
</tr>
<tr>
<td><strong>1. Correctly Identified</strong></td>
<td>If the child provides the response marked on the survey sheet within the given time, you should circle this response.</td>
</tr>
<tr>
<td><strong>2. Incorrectly Identified</strong></td>
<td>If the child provides a response within the given time but it is not the right one (as marked on the survey sheet), you should circle that they have incorrectly identified an answer.</td>
</tr>
<tr>
<td><strong>3. Not attempted</strong></td>
<td>Use this option if the child does not provide any response to the question during the allotted time. A question should only be marked as “not attempted” if the child says that s/he does not know or gives no answer at all.</td>
</tr>
<tr>
<td><strong>External help</strong></td>
<td>If at any point a third person helps the child by pointing to or verbalizing an answer you must note this down here. Mark “1 Yes” if the child received external help. Mark “2 No” if the child did not.</td>
</tr>
</tbody>
</table>
If a Child Doesn’t Know the Answer

When you are administering the Learning Assessment, you will come across children who do not know how to answer many of the questions. That is fine. However, if this happens, you should not help the child. You can encourage the child by saying general things like “you’re doing a really good job!” or “that was a good try!” but you must not ever give an answer to the child or help the child. For counting, addition, or subtraction questions, you can suggest that the child use stones or sticks to help him, but you should not count along or help in any other way. For the reading questions, you can suggest that the child try to sound out the words, but he must sound out the words himself. You should not help by sounding out words or letters.

It is not a problem if the child says they don’t know how to answer a question. Just tell the child something like “you’re doing great! Let’s try another question.” In these cases, you do not need to wait the full 15 seconds for that question, but can immediately move on to the next question.

If the child gets the first few questions in the assessment wrong, please do not stop the assessment. If the child is calm and willing to keep going, you should continue the assessment until the end, even if he gets all of the questions wrong.

If a child gets a little frustrated because he cannot answer a question, you should wait for the time allotted by that question (usually 15 seconds). If the child does not give an answer in that time, the question should be marked as “Not Attempted” and you should try to move on to the next question.

If the child gets very frustrated or angry and does not want to continue the assessment, you should first try to encourage the child to continue. If, however, the child continues to refuse, you should not pressure him or her to continue. If this happens, please stop the interview and record the disposition on the contact sheet that corresponds with this situation. Please remember that the reason for stopping an assessment should be related to the child’s mood, not to his ability to answer the questions correctly.
Section 1: Survey management

SECTION 1 AT A GLANCE...

This section of the survey comprises 26 questions (H1, E1, M1 to M21, and D1 to D3). It collects information on the child, their family and community demographics.

Almost all of the questions in this section should be answered by observation only and may be completed BEFORE you approach the household.
<table>

Section 2: Greetings and introductions / Consent

SECTION 2 AT A GLANCE...

This section sets the tone for the rest of the interview. It also includes the script you need to read in order to obtain informed consent. The script itself is provided in Annex 2.

📚 You must read the script provided in Annex 1 (greetings and instructions) and Annex 2 (consent) word for word.
Read the script provided out loud (see Annex 1)

After reading the script your next steps should be based on the responses you receive.

**CHILD DECLINES CONSENT:** If the child disagrees thank them for their time and move on to the next household.

**CHILD AGREES:** If the child provides their consent to participate in the survey you should thank them and confirm that the head of household also provided consent for the child’s participation.

**CHILD DOES NOT UNDERSTAND:** If the child does not understand, ask him or her what she or he does not understand and answer his or her questions.

**Observation only (check the HH questionnaire)**

**Consent 1 (child consent):**
Do you understand? Are you ready to get started?

**Consent 2 (adult consent):**
Confirm from the household questionnaire that the head of household provided consent to interview the children.
Section 3: Learning Assessment

SECTION 3 AT A GLANCE...

The learning assessment consists of three sections:
1. Practice questions (2 questions)
2. Math test (4 questions)
3. Reading test (6 questions)

The learning assessment tool includes detailed instructions for how to ask, time, and mark each question. Please make sure that you are extremely familiar with the instructions provided for each question. You should also be familiar with all answers.

The Q2 series has skip patterns. Make sure that you follow these as instructed.

Special instructions for specific questions

<table>
<thead>
<tr>

Test your knowledge: quiz 1

The following questions will test your knowledge on conducting research with children. Use this quiz to identify areas that you are less familiar with and that you should spend more time reviewing. See Annex 2 for the correct answers.

1. Conducting research with children is different to conducting research with adults because:
   a. They don’t understand anything.
   b. They may feel intimidated by adult researchers
   c. It does not require informed consent.

2. **True or False.** If a parent provides permission for you to conduct the learning assessment but the child says that they do not want to participate then you should not conduct the assessment.
   a. True
   b. False

3. Which of the following describes how you should react in the case where a child does not know the answer to a question and the time during which they should provide the answer is running out?
   a. You should gently help the child by pointing to the correct answer.
   b. You should express your disapproval and tell them they should do better next time.
   c. You should let the time run out without helping the child, reassure them that this is not a test, and move onto the next question.

4. **Describe how you should respond to the following situation:** You have asked several questions that the child has been unable to answer. The child starts to look upset and their father is sitting opposite them telling them they must do better next time.

   __________________________________________
   __________________________________________
   __________________________________________

5. **True or false.** If a child is hesitating between two answers to a question and their parent who is in the room tells them which of the two answers it is, then you can mark down that the child said the correct response.
   a. True
   b. False
Test Your Knowledge: Quiz 2

The following questions will test your knowledge on different learning assessment questions. Use this quiz to identify areas that you are less familiar with and that you should spend more time reviewing. See Annex 3 for the correct answers.

1. Where can you find the enumeration number, which is recorded in E1 of the Learning Assessment’s Management section?
   a. In E1 of this household’s Household Survey
   b. It is the number written by the enumerators on the door of this house.
   c. Both A and B
   d. Neither A or B

2. If a child gets two numbers correct and three numbers incorrect in Q1a and then refused to identify any more numbers, how many numbers should be marked as Not Attempted?
   a. 3
   b. 5
   c. 7

3. True or False: If the child counts the wrong number of hearts in Q2c, the interviewer should skip Q2cc and next ask Q2d.
   a. True
   b. False

4. When answering Q7a, the child correctly sounds out all of the sounds in the word, but he does not say the word. Should this response be marked as correct, incorrect or not attempted?
   a. Correctly Identified
   b. Incorrectly identified
   c. Not Attempted
Annex 1: Consent

I am (say your name). Let me tell you why we are here today. We are trying to learn more about how children like you learn. If it is OK with you, I would like to play a short educational game with you, but you do not have to play if you don’t want to.

I am going to ask you to count, read numbers, add, subtract, read letters and words, and read a short story aloud. This is NOT a test and we will not share your answers with anyone else.

We will start with a few questions about you, and then we will do the math and reading game. For each question, I will read you the instructions. You should give the answer that fits best. You can ask me anytime if you don’t understand the question. I will record your answer exactly as you tell it to me. Once again, you do not have to participate if you do not want to. Once we begin, if you don’t want to answer a question, that’s OK.

Do you understand? Are you ready to get started?

1. Yes [Continue to Consent 2]
2. No [End interview and start interview with next child on new questionnaire]

If the child does not understand, ask what the child does not understand and clarify the issue for the child.

If the child answers “No”, then thank the child and let him/her go. Leave the rest of the questions blank, and start to interview the next child.

To the Interviewer: Confirm from the household questionnaire that the head of household provided consent to interview its children.

1. Yes [Continue to P1]
2. No [End Interview and move on to the next house]
Annex 2: Answers to quiz 1

1. Conducting research with children is different to conducting research with adults because:

   a. They don’t understand anything.
   b. They may feel intimidated by adult researchers
   c. It does not require informed consent.

2. **True or False.** If a parent provides permission for you to conduct the learning assessment but the child says that they do not want to participate then you should not conduct the assessment.

   a. True
   b. False

3. Which of the following describes how you should react in the case where a child does not know the answer to a question and the time during which they should provide the answer is running out?

   a. You should gently help the child by pointing to the correct answer.
   b. You should express your disapproval and tell them they should do better next time.
   c. You should let the time run out without helping the child, reassure them that this is not a test, and move onto the next question.

4. **Describe how you should respond to the following situation:** You have asked several questions that the child has been unable to answer. The child starts to look upset and their father is sitting opposite them telling them they must do better next time.

   You encourage the child by telling him or her that it is okay if he or she does not know the answers to all of the questions. The two of you are just playing a game, and some of the questions are very hard.

5. **True or false.** If a child is hesitating between two answers to a question and their parent who is in the room tells them which of the two answers it is, then you can mark down that the child said the correct response.

   a. True
   b. False
Annex 3: Answers to Quiz 2

1. Where can you find the enumeration number, which is recorded in E1 of the Learning Assessment’s Management section?
   a. In E1 of this household’s Household Survey
   b. It is the number written by the enumerators on the door of this house.
   c. Both A and B
   d. Neither A or B

2. If a child gets two numbers correct and three numbers incorrect in Q1a and then refused to identify any more numbers, how may numbers should be marked as Not Attempted?
   a. 3
   b. 5
   c. 7

3. True or False: If the child counts the wrong number of hearts in Q2c, the interviewer should skip Q2cc and next ask Q2d.
   a. True
   b. False

4. When answering Q7a, the child correctly sounds out all of the sounds in the word, but he does not say the word. Should this response be marked as correct, incorrect or not attempted?
   a. Correctly Identified
   b. Incorrectly Identified
   c. Not-Attempted
